Dear Hiring Manager,

I am writing to express my interest in the Full Stack .NET / Angular Engineer position at your organization. I am a Full Stack Software Engineer with 4.5+ years of experience designing and building scalable applications using Angular, TypeScript, and .NET Core / C#, with additional exposure to React and Next.js.

Throughout my career at organizations such as Bajaj Finserv and Revenue Technology Services (RTS), I have built enterprise-grade applications that serve large user bases, including a consumer fintech platform used by over 50 million users. I played a key role in migrating a native Android sales application to a Progressive Web App (PWA) for more than 70,000 employees, and led performance optimization work that improved application load times by roughly 60%.

In my current role at RTS, I contribute to airline cargo management systems, building Angular standalone components for real-time flight tracking and operational dashboards alongside modular .NET Core backend services and REST APIs. I bring experience across CI/CD pipelines, application security (JWT authentication, CSRF protection), and, more recently, GenAI-powered internal tools built with LangChain and Gemini.

I am passionate about building reliable, scalable full-stack platforms and enjoy solving engineering challenges that span both frontend and backend. I would welcome the opportunity to bring this experience to your team and contribute to your product's growth.

Sincerely,

Sai Ram Reddy
